Education

B.Tech, Motilal Nehru National Institute of Technology Allahabad *2022–2026*
Computer Science and Engineering | CGPA: 7.55

Class 12th, SDVM Public School, Gwalior, MP *2021*
Percentage: 82%

Class 10th, Vidya Niket School, Gwalior, MP *2019*
Percentage: 90.6%

Experience

Grid Dynamics *Jan 2026 – Jul 2026*
Software Engineering Intern

- Engineered backend modules for **TalentGrid**, an AI-native workforce intelligence platform structured on a microservices architecture with multiple independently running Spring Boot services, Apache Kafka, and a shared PostgreSQL database.
- Designed and implemented RESTful APIs and HTTP endpoints for the **Interview**, **Scorecard** and **Analytics** modules using Spring Boot, Spring MVC, and Spring Data JPA, following a layered Controller–Service–Repository architecture with DTO-based request/response contracts.
- Integrated **Apache Kafka** for asynchronous, event-driven communication between backend services, and worked with **PostgreSQL** for schema design and data persistence, including debugging Flyway migration and schema-versioning issues across services.
- Collaborated with a **6-team cross-functional engineering organization** on a modular backend platform for the Talent Acquisition Engine, participating in code reviews, Agile ceremonies, and SDLC processes.

Projects

CodeForge - Real-time Collaborative Code Editor *Link*

- Created a real-time collaborative platform supporting concurrent code editing, voice chat, and competitive programming across multiple simultaneous sessions.
- Implemented real-time state synchronization (Socket.IO) and peer-to-peer voice (WebRTC) over a Node.js & Express.js backend, with JWT-authenticated, isolated room sessions.
- Integrated a sandboxed code-execution service (Judge0) to support real-time code battles and leaderboards, handling concurrent execution requests.
- Designed a responsive CodeMirror-based UI using React, Tailwind CSS, and ShadCN, with efficient client-server state management via React Query.

InsightPilot | AI-Powered Business Intelligence Platform *Link*

- Built a GenAI-powered analytics platform that converts natural-language questions into SQL queries to analyze CSV datasets.
- Implemented LangGraph-based LLM routing to direct queries across data analytics, document retrieval, and combined workflows
- Integrated Chroma-based Retrieval-Augmented Generation (RAG) to retrieve relevant information from uploaded business documents and generate context-grounded responses.
- Developed a React and TypeScript chat interface backed by FastAPI REST endpoints, enabling users to query datasets and business documents through natural-language conversations with source attribution.

Technical Skills

Languages: Java, Python, JavaScript, SQL
Backend & APIs: Spring Boot, Spring MVC, FastAPI, Node.js, Express.js, REST APIs, WebSockets
Data & Databases: PostgreSQL, MySQL, Pandas, SQLite, MongoDB
AI/GenAI: LLMs, Retrieval-Augmented Generation (RAG), LangGraph, Chroma
Developer Tools: Git/GitHub, Maven, Postman, JUnit, VS Code
Frontend: React.js, Tailwind CSS, React Query, Shadcn/UI
Areas of Interest: Data Structures & Algorithms, Object-Oriented Design, DBMS, AI/ML

Positions of Responsibility

- **Coordinator**, Astro Club, MNNIT | **Web Team Member**, Institute Innovation Council (IIC), MNNIT

Certifications & Achievements

- **Microsoft Certified: Azure Fundamentals (AZ-900)** – Foundational certification in Microsoft Azure cloud services, security, pricing, and governance.
- **Uhack 2.0 Hackathon (Best UI/UX Winner):** Won Best UI/UX for developing a health-focused website with an AI chatbot using the MERN stack, RASA, and NLTK.
- **Codeforge (Botrush) – First Runner-up:** Developed an AI-powered disease diagnosis website with a MongoDB, Express.js, React, and Node.js stack, integrating RASA, NLTK, and symptom analysis APIs.
- **Webster (Codesangam) – Ranked 6th (Top 2nd Year Team):** Created a MERN-based task management web app with note-taking, reminders, to-do lists, Markdown support, and canvas integration.
- Solved **1000+ Data Structures & Algorithms** problems across LeetCode and GeeksforGeeks using Java.
